

FIG. 1(A) is a perspective view of a container 10 in an open position. The container 10 is a cylindrical vessel with a flared top rim 11. A lid 14 is shown detached from the container 10. The lid 14 has a central opening 16 and a flange 18. A gasket 31 is located between the lid 14 and the container 10. The gasket 31 is a ring-shaped member with a central opening 39. A bolt 34 is used to secure the lid 14 to the container 10. The bolt 34 passes through the lid 14, the gasket 31, and the container 10. A nut 37 is used to secure the bolt 34. The container 10 is shown in a perspective view, and the lid 14 is shown in a perspective view. The gasket 31 is shown in a perspective view. The bolt 34 is shown in a perspective view. The nut 37 is shown in a perspective view.

FIG. 2(A) is a perspective view of the container 22 in an open position. The container 22 is a cylindrical vessel with a flared top rim. The lid 11 is shown detached from the container 22. The lid 11 has a central opening 16 and a flange 18. The lid 11 is secured to the container 22 by a locking mechanism 37, which includes a pin 39 and a nut 37. The lid 11 is shown in a position where it is being lifted off the container 22.

FIG. 7 is a perspective view of the device 100 in a closed position, showing the flow of air or fluid from the inlet 78 to the outlet 94.

FIGURE 7

FIG. 8(A) is a perspective view of the device 37 in a closed position. The device 37 includes a handle 39 and a body 52. The body 52 has a central opening 56 and a side opening 58. The handle 39 is connected to the body 52 by a hinge 54. The device 37 is shown in a closed position, where the handle 39 is rotated to the side of the body 52.

FIGURE 8

FIG. 9(A) is a perspective view of the device 37 in a closed position. The device 37 includes a first end 56 and a second end 58. The first end 56 is connected to the second end 58 by a central portion 52. The central portion 52 includes a first side 72 and a second side 74. The first side 72 is connected to the second side 74 by a central portion 39. The central portion 39 is connected to the first side 72 and the second side 74 by a central portion 52.

FIGURE 9

FIG. 10 is a cross-sectional view of a container 100, showing a soft material 102 and a hard plastic 106. The container 100 is filled with a material 106, which is shown in a cross-sectional view. The container 100 is shown in a cross-sectional view, with the soft material 102 and the hard plastic 106. The container 100 is shown in a cross-sectional view, with the soft material 102 and the hard plastic 106.

FIG. 13 is a cross-sectional view of the shoe sole assembly 130, showing the sole assembly 130 in cross-section. The sole assembly 130 includes a sole member 132 and a sole member 134. The sole member 132 is a sole member 132, and the sole member 134 is a sole member 134. The sole member 132 is a sole member 132, and the sole member 134 is a sole member 134.
